

BEANSGLAM 480 SL

Bentazone 480g/l

Early post emergence herbicide for control of broad leaf weeds in
POTATOES, GREENGRAMS and COMMON BEANS

DESCRIPTION:

BEANSGLAM 480SL is a selective herbicide for early post emergence control of broad leaf weeds in potatoes, greengrams and common beans.

Mode of action: The active ingredient Bentazone is a thiadazine that is taken up mainly through the green parts of the plant. It acts by inhibiting photosynthesis.

Mixing instructions: Fill the spray tank half way with water. Add the recommended amount of **BEANSGLAM 480SL**. Complete to fill to the desired quantity of water as required while stirring constantly. Apply the spray mixture immediately after preparation.

DIRECTIONS FOR USE/Application rates:

Crop	Weed	Application Rate	Timing & frequency of application
Potatoes	Broad leaf weeds	1.5l/ha/400l water; 75ml/20l water	Apply once per season when weeds are at 3-5 leaf stage
Common beans & greengrams		2l/ha/200l water; 150-200ml/20l water	

PRE-HARVEST INTERVAL: Potatoes and common beans: 35 days.

RE-ENTRY PERIOD: 6 hours.
