

KINGA MAGONJWA YA 'BARIDI' MANCOBEX 80WP NA IMPRESS 720WP

MANCOBEX 80WP

A broad spectrum protectant fungicide for the control of Early and Late Blight in Tomatoes and Potatoes.

MODE OF ACTION; When exposed to air, MANCOBEX 80WP is converted to Isothiocyanate which attacks the -SH group in the fungi preventing growth of the fungi on the crop.

HOW TO USE; Thorough coverage of plant foliage is necessary for effective disease management. Applications should be started at the appearance of disease symptoms and repeated at 7 days interval. If the weather is cold and wet, the interval should be reduced to 4-7 days.

MANCOBEX 80WP is protectant in action. Best results are achieved when it is applied before disease onset or immediately on appearance of symptoms!

MIXING; Mix the required amount of **MANCOBEX 80WP** with sufficient water in a bucket to make a thin paste. Pour the paste into the bulk of water in the spray tank as you agitate.

CROP	PEST	APPLICATION RATE
Tomatoes and Potatoes	Early and late blight diseases	2.5kg/ha or 50g/20L of water

IMPRESS 720WP

A protectant and curative Fungicide for the control of Early and Late Blight in Tomatoes and Potatoes and Downy Mildew on Roses

IMPRESS 720WP has two Active Ingredients; Cymoxanil has contact and systemic activity that stops sporulation of disease. It has both protective and curative action.

Mancozeb is the protective component that gives **IMPRESS 720WP** contact and residual anti-fungal activity that prevents spore germination.

IMPRESS 720WP is applied for prevention when weather conditions favor disease development i.e. humid and damp, at intervals of 5-7days. When disease conditions are low, repeat at intervals 10-14 days.

Crops	Diseases	Rate (Kg/Ha)	Rates g/20L	Water volume
Roses	Downy Mildew	2.0kg	40g	400L/Acre or 1,000L/Ha
Tomatoes and Potatoes	Early and Late Blight	2.0kg	40g	400L/Acre or 1,000L/Ha

PREHARVEST INTERVAL: 10 days for Potatoes, Tomatoes and Roses.
